Henry Lam

henry.lam.7369@gmail.com | github.com/henlam1 | linkedin.com/in/henry | New York, NY

Education

Cornell University - Cornell Tech Expected May 2027

Master of Engineering in Computer Science

- Courses: Product Studio, Optimization Methods, HCI and Design, Applied Machine Learning, Algorithms for Applications

Stony Brook University Aug 2020 – May 2024

Bachelor of Science in Computer Science

- GPA: 3.7/4.0 | Magna Cum Laude | Dean's List
- Courses: Software Engineering, System Fundamentals I & II, Artificial Intelligence, Compiler Design, Computer Networks, Data Structures, Object-Oriented Programming

Projects

GoPack | *React, Node.js, Express, MongoDB, OpenAI API, Jest, Playwright, AWS, Render* Aug 2024 - Aug 2025

- Reduced redundant API calls by an estimated 40% by integrating React Query caching with REST API endpoints
- Decreased manual edits by an estimated 35% by building an AI-powered packing suggestion engine using the OpenAI API to generate personalized suggestions
- Mitigated XSS vulnerabilities by implementing secure authentication with httpOnly JWT access/refresh tokens
- Boosted app scalability and reliability by migrating services from Render to AWS
- Lowered deployment errors by an estimated 80% by automating 100+ unit and E2E tests with Jest and Playwright in CI/CD

GreenStand Open Source | *React, React-Leaflet, CI/CD* Aug 2023 - Sep 2023

- Fixed a site-wide map interaction bug where navigating to a tree via direct link caused all other map markers to stop displaying data, restoring core functionality across the platform
- Merged the fix into production after multiple rounds of code review with project maintainers

Web Scraping Discord Bot | *Python, Beautiful Soup, Pillow, Selenium, Heroku* May 2022 - Nov 2022

- Built and deployed a web-scraping Discord bot to a 100+ member server, driving 20+ active users to generate 200+ infographic images at peak monthly usage
- Reliably collected dynamically rendered content by configuring Selenium to simulate real browser interactions
- Achieved 90% uptime during active use by automating deployments on Heroku using CI/CD pipelines

Experience

Software Developer Nov 2024 – Apr 2025

UnieLogics - Early-stage startup *New York, NY*

- Replaced manual account creation with Google OAuth 2.0 single sign-on, significantly reducing login friction and eliminating manual signup steps
- Refactored legacy codebase to reduce technical debt and simplify future features
- Built an automated email notification system for password recovery and account verification, adding core account-management features to the platform

Technical Skills

Languages: Python, TypeScript, JavaScript, Java
Frontend: React, React-Query, HTML/CSS
Backend: Node.js, Express.js, RESTful APIs
Databases: MongoDB
Auth & Security: OAuth 2.0, JWT Authentication, httpOnly Cookies
Cloud & DevOps: AWS, Heroku, CI/CD, GitHub Actions
Testing: Jest, Playwright, Selenium, Postman
AI Tools: Claude, ChatGPT
